What's Going On!

You have seen the earthwork machines clearing the entire construction site to be used for the Islamic Community Center. This is not all that is in Phase 1A, there is much more! It includes:

- Grading the entire construction site, laying the stone sub-base for the access road, 286-car parking lot and walkways.
- Laying the asphalt binder on the 900 ft access road so you can visit the building site.
- Bringing water and sewer lines near the building to be connected to the Town plumbing once the building construction starts.
- Building storm water detention ponds, laying topsoil and seeding the entire disturbed land.

It will give you an appreciation of the vast 46-acre site and future possibilities while bringing us closer to completion of the Phase 1 building!

Salam Br. Abdulilah. I was passing by and stopped there this morning and said a dua. It's really nice to see this, ma sha Allah. May Allah make it easy for us to keep moving forward.
-Amir Durić
